

## **ULTRA**

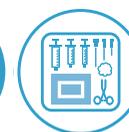

Reinforced Sterile Barrier System  
for the packaging of heavy  
and bulky devices and surgery trays

- Optimized packaging for reusable medical devices within Healthcare facilities
- Compatible with steam and hydrogen peroxide sterilization processes

# POUCHES AND REELS **ULTRA**

**Packaging optimized for Reusable Medical Devices**  
 Simple steam indicator, intrafilm print  
 1 porous polyolefin side / 1 blue tinted transparent film side

A revolutionary reinforced packaging concept for Reusable Medical Devices, which can complement or replace the traditional packaging used by CSSDs in hospitals.

The SBS Ultra are almost tear-proof and allow for securing the maintenance of the sterility of the devices and to increase the expiry dates in sterile storage.

Thanks to an innovative reinforced porous side, this SBS offers much higher resistance to perforation than conventional packaging.

Its transparent film allows, for the very first time, to visualize the content of the trays before opening.

**Efficiency and resistance to the sterilization process**

The higher seal strengths of Ultra packaging considerably reduce the risk of bursting during sterilization. This limits the need for reprocessing and improves the efficiency of the RMD packaging process.

**Sterility maintenance and compliance**

The resistance to perforation and tearing of the Ultra material gives it much higher integrity than conventional packaging for the transport and storage phases. ULTRA complies with EN 868-5, EN ISO 11607-1 standards and is tested for up to 12 months (single packaging) to maintain sterility in hospital conditions.

**Reduction in packaging waste**

Compared to a standard envelope-type packaging system (wraps), Ultra adapted to the formats of instrumentation trays considerably reduces the volume of packaging materials used.

**Transparency and visibility of content**

The transparent film side of Ultra allows users (OR) to view / check the content of surgical trays before opening without compromising sterility.

**High aseptic performance**

A unique peel quality that eliminates any risk of defibration or tearing. A porous synthetic face and a "Peel" film allow aseptic opening without particle emission.

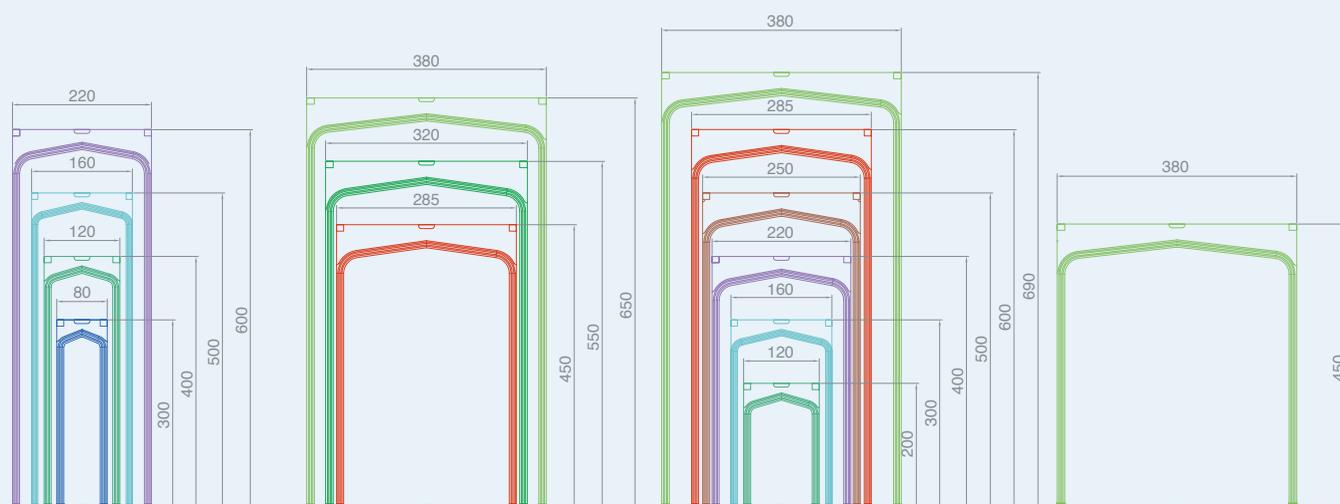

**Product Applications**

- Standard trays (care, dental)
- Heavy surgical trays (Orthopedics)
- Loan sets
- Complex devices (cutting, edged, fragile, robot)
- RMD usually packed with paper/film pouches.

Indicator for steam sterilisation printed within the film structure.

### New Range ULTRA

CODE	SIZES (mm )
SUL080X300	80 x 300mm
SUL120X200	120 x 200mm
SUL120X400	120 x 400mm
SUL160X300	160 x 300mm
SUL160X500	160 x 500mm
SUL220X400	220 x 400mm
SUL220X600	220 x 600mm

CODE	SIZES (mm )
SUL250X500	250 x 500mm
SUL285X450	285 x 450mm
SUL285X600	285 x 600mm
SUL320X550	320 x 550mm
SUL380X450	380 x 450mm
SUL380X650	380 x 650mm
SUL380X690	380 x 690mm
